

TILERS SPONGE FLOATS

TILERS SPONGE FLOATS

- for applying tile cements & grouts
- sponging & cleaning off adhesive residues
- wash bucket for cleaning sponges

There are two types of tile cleaning hydro sponge; the standard one has a hard wearing coarse sponge face and the other has cross cut sponge face; the cross cut sponge holds more water

The sponge floats are cleaned in the wash bucket and excess water squeezed out on the rollers

The floats with abrasive pads are for final cleaning of cement film from the tile surfaces

The yellow hydro sponge floats are used to clean off the grout residues
