

COMPACT DUSTEX VACS

XD171 COMPACT DUSTEX VAC

- powerful by-pass three stage motor
- twin large area filters
- add-on pre-separator for heavy dust volumes
- reduced hazards through airborne dust
- effective dust control for fine dust residues

Dustex vacs will control dust at source to give a cleaner and more professional working environment as required by main contractors and authorities. Health hazards caused by noxious particles are reduced

The improved XD171 is a 1500 watt compact dust extraction vac for the efficient collection of plaster, concrete, stone, wood and surface prep residues. It is for use with concrete cutters, grinders, sanders and paint strippers

It has a hi-flow three stage, by-pass vacuum motor, pre-filter and internal cartridge filter. The unit has a heavy duty rotomoulded vacuum body that will not get dented or damaged

The coarser particles are filtered out by the easy to clean pre-filter cone. The pleated central white filter removes finer dust down to 2 microns

When coupled to the PC80 pre-separator cyclone, 80% of the dust is removed before it gets to the main filter and is recommended for the contractor expecting to collect more than a builders bucket of dust in a half day shift

Using the PC80 pre-separator and vac to prep plaster walls or drywall joints, reduces down time for filter maintenance

The pre-separator also works well as a water pick collector

The XD171 is supplied with 5m hose, polyester pre-filter cone, pleated central filter and filter brush.

The XD171S is fitted with an automatic switch for use with power tools up to 1500 watt

APPLICATIONS

- effective dust control & extraction
- for concrete & stone grinding
- plaster dust & drywall joints
- wood & board sanders
- paint & artex

XD171 DUSTEX VAC 1500w

Weight 15kg

Size WxL38x43cm

Height 86cm

Hose diameter 38mm

Hose length 5m

Vacuum 235m³/hr

Noise level 71dBA

Voltage 110v or 230v

Transformer 3kva, 16 amp plug

DUSTEX HEPA VACS

XD181 DUSTEX HEPA VAC

- powerful by-pass three stage motor
- twin large area filters
- add-on pre-separator for heavy dust volumes
- reduced hazards through airborne dust
- effective dust control for fine dust residues
- hepa filter included as standard

The XD181 vacs use the same motor as the compact XD171 vacs, but have a longer drum body for better internal dust separation allowing the use of Hepa filters

Dustex vacs will control dust at source to give a cleaner and more professional working environment as required by main contractors and authorities

Fitted with hepa filters, the airflow is filtered down to one micron reducing health hazards caused by noxious particles

The advantages of a cleaner work area are clearly visible because of the absence of material residues everywhere. The improved health advantages to the worker are less obvious because the dust particles that are most damaging to one's health are often the smallest particles that are not visible and will pass through a standard dust mask

The XD181 range have hi-flow three stage, by-pass vacuum motors, pre-filter and internal cartridge filters. The vac drum has a heavy duty rotomoulded body that will not get dented or damaged and is produced with heavy duty protective frame

The coarser particles are filtered out by the easy to clean pre-filter cone. The pleated central yellow hepa filter removes particles down to below 1 micron

The PC80 pre-separator cyclone remove 85% of the dust before it gets to the main filter allowing longer periods between filter cleaning

APPLICATIONS

- effective dust control & extraction
- for concrete & stone grinding
- plaster dust & drywall joints
- wood & board sanders
- paint & artex

TWO & THREE MOTOR DUSTEX HEPA VACS

TWO & THREE MOTOR DUSTEX VACS

- powerful bypass motor industrial vacuums
- polyester or hepa filters available
- dust control for power tools & machines
- surface preparation machines & floor sanders
- cleaner & more efficient working environment
- reduced hazards through airborne dust
- three stage high efficiency motors
- large area star filter with manual shaker

These dustex vacs use powerful two and three motor vacuums with a sturdy trolley that fits easily into an estate car

They feature independent bypass vacuum motors, cyclone separator, primary star type filter and secondary cartridge Hepa filter

Initial separation is by the internal cyclone that removes the coarser particles. The second stage star filter removes 90% of the remaining dust

The final filter is either a 2 micron cartridge which is fitted as standard or the 1 micron Hepa filter

The units are fitted with a manual filter shaker

A pre-separator is available to further improve dust collection before it gets to the main vac and filter

APPLICATIONS

- effective dust control
- for concrete grinders
- diamond cutters & routers
- floor & wood sanders

VAC BRUSHES & HOSE

VAC TOOLS & HOSE

- range of vac tools & accessories
- reducers & hose connectors
- universal brushes & floor tools

The vac hose is flexible with smooth internal bores for carrying fine dust particles and prep residues

End cuffs finish off the hose and ensure a good fit with power tools and flooring equipment

The smaller 32mm and 38mm hose are normally used with surface prep power tools and the 50mm hose used with flooring machines and also the two and three motor industrial vacs
