

DRYWALL & BOARD TELE-PROPS

TELE-PROP BOARD JACK

- adjustable height prop with lever jack
- maximum 45kg lift
- jack & prop up boards and panels
- fix temporary battens
- use to put up polythene screens
- reliable German made lifting tool

The telescopic quick prop has a sprung quick release head that springs into position after triggering the release button

The quick release trigger springs the top plate up into position to meet the ceiling, joist, batten or board

The top and bottom plates have swivel ball joints that allow the prop to be fixed in position at an angle up to 50°

The manual height adjustment knob allows the prop to set to the approximate height to be used
The power lever can be used to increase the pressure on the prop head

The stand board prop does not have the quick release spring head mechanism

The shorter props can be used vertically or horizontally for holding, positioning and fixing doors, windows, frames and battens

The tele-props are also used to hold dust sheets or polythene sheeting in place to restrict dust circulation
