

SPIKED ROLLERS

SPIKED ROLLERS

- two spike profiles
- sizes from 7" to 30"
- with freely rotating & replaceable discs
- new design with fixed discs for a solid roller
- for rolling out air bubbles
- levelling & moving
- epoxy coatings & self-levellers

The new design spiked rollers are made up of individual discs with 20mm spikes

The standard rollers have individual discs that freely rotate on the centre bar

Alternatively the discs are produced linked together so the whole roller rotates

They are produced with spike lengths of 20mm or 30mm with an overall diameter of 7cm & 10cm

The larger spikes are normally used for self-levellers and pumped screeds
